

## IGNACIO TOMÁS ALVAREZ GONZALEZ - Computer Engineer

### PROFILE

Software developer with professional experience in C#/.NET and ERP systems, along with additional hands-on experience in Java/Spring. Backend-oriented, with a focus on integrations, automation, and business process optimization. Experienced in solving high-volume processing, performance, data access, external API integration, and business rule challenges. Also experienced in full-stack development and application deployment. Focused on software quality, technical pragmatism in production systems, and the transition toward modern engineering methodologies.

### SKILLS & TECH STACK

- **Backend:** C#, .NET/.NET Core, WebAPI, POO, Java/Spring Boot.
- **Frontend:** Blazor, Angular, TypeScript, JavaScript(ES6+), HTML y CSS.
- **Databases:** SQL Server, MySQL, Optimized Queries, Stored Procedure, Views.
- **Testing:** JUnit, Mockito, xUnit.
- **Architecture:** Design Patterns (MVC, SOLID, Unit of Work), Data Structures.
- **Tools & Methodologies:** DevExpress, SVN, REST APIs, Git, UML, Agile Methodologies.

### WORK EXPERIENCE

#### Backend Developer | GRIBA SAS - [December 2024 - Present] - (Tucumán - Argentina)

- Design, develop, and maintain new modules for an enterprise ERP system using C#, .NET 6, and DevExpress 23.2.
- Strategic migration of the system from a classic desktop environment to a unified web platform. Adopted Blazor as the primary SPA framework within the .NET ecosystem, successfully reducing technical debt in core business functionalities.
- Optimized the data persistence layer by analyzing and refactoring queries and stored procedures in SQL Server.
- Integrated the system with external services by consuming third-party APIs (Evolution API, Payway, ARCA, Mercado Libre).

#### Web Developer | Ente Tucumán Turismo - [April 2021 - March 2022] - (Tucumán - Argentina)

- Gathered requirements, designed, and developed a CMS with role-based access control for dynamic data management, alongside the public-facing website for data visualization (using PHP 7, JavaScript, HTML, and CSS).
- Designed and administered the database schema utilizing the MySQL engine.
- Developed a portable, cross-platform application for exhibitions using C# and Unity.

### ACADEMIC PROJECTS

#### Graduation Thesis: Stock Management System for Manufactured Products | Universidad Nacional de Tucumán - [2024 - 2025 (12 months)]

- Architected and designed a comprehensive application consisting of a backend REST API and a frontend GUI utilizing Angular 19, .NET 9, and a MySQL persistence layer with ACID-compliant transactions (InnoDB).
- Requirements Engineering: Authored system specifications following the ANSI/IEEE 830-1993 standard with an evolutionary prototyping lifecycle and the V-Model methodology, ensuring full traceability between requirements and implementation.
- Produced exhaustive technical documentation using UML standards (Class, Sequence, and Entity-Relationship diagrams) to ensure architecture scalability.

#### Java Backend Bootcamp | Globant (Code Your Future Scholarship) - [2024 - 2025 (8 months)]

- Intensive software engineering program focused on enterprise backend development using Java and Spring Boot.

- Two personal projects currently under development stem from the knowledge acquired in this bootcamp: Educational Management Platform (MVP) and Exercise and Workout Tracking System.

#### **Voice Biometric Detection (Signals Academic Project)**

- Algorithmic development in Python for digital signal processing, applying Fourier Transforms to detect vowels by gender and age through formant analysis, demonstrating a strong logical and mathematical foundation.
- Implementation of a web demo using the same algorithms in JavaScript.

#### **Personal Web Portfolio**

- Development of a website with Angular 19 using SSR and prerendering, adopting an architecture based on standalone components and typed data.
- Implemented a complete internationalization system (Spanish/English) using \$localize and static language-specific routes for SEO in both languages, responsive design with a fixed sidebar layout and bento-style grid (Tailwind CSS v4), a contact form with asynchronous submission via Fetch API + FormData integrated with Formspree, and a CI/CD pipeline with GitHub Actions for automated build and deployment to GitHub Pages.

### **EDUCATION & CERTIFICATIONS**

**Bachelor's Degree in Computer Engineering | Universidad Nacional de Tucumán (2014 - 2026)**

**Java Backend Bootcamp | Globant (Code Your Future Scholarship) (2024 - 2025)**

**Mobile Application Development | Argentina Programa 4.0 (2023)**

**JavaScript Fundamentals | Universidad Nacional de Tucumán (2019)**

**Automated Testing Fundamentals | Universidad Nacional de Tucumán (2019)**

**Unity Game Development | Universidad Nacional de Tucumán (2018)**

### **IDIOMAS**

**Spanish:** Native.

**English:** Intermediate (B1) — Proficient in technical reading and professional communication.
